LEVITASK

Vision Chair

Installation & First Experience Guide

Everything you need to assemble, adjust, and experience Elevated Seating for the first time.

Assembly ~10 min · First Experience ~20 min · No tools required

WELCOME

Welcome to the Levitask Family

Thank you for joining us on a mission to redefine ergonomic seating.
The Vision Chair represents a fundamental shift in how we sit. By positioning you in an elevated, open hip-angle posture, it unlocks natural spinal alignment that traditional chairs cannot achieve.

Important: use with a height-adjustable desk
The Vision Chair is designed to be used with a height-adjustable desk.
Set your armrest pads to the same height as your desk surface.
This alignment is essential for the full Elevated Seating experience.

Why this guide?
Your first experience with the Vision Chair matters. This guide walks you through assembly, adjustment, and your first seated session so you can confidently communicate its benefits to every customer.

Assembly ~10 min · First experience 15–20 min · No tools required

SETUP

Assemble & Adjust

ASSEMBLE

1

Unbox

Lay all components on a flat surface. Zero Series packaging is built for protection. Final retail packaging will reflect the premium product inside.

2

Assembly Video

2 min · No tools needed

3

Assemble the Chair

Follow the video step by step. All connections use hand-tightened knobs, no tools needed.

Select the correct standpipe for your height:

Standpipe A: taller than 165 cm · Standpipe B: 145 to 165 cm

ADJUST

A

User Guide Video

2 min · All functions explained

B

Adjust to Your Body

Backrest Height

Raise or lower until the lumbar pad aligns with the natural curve of your lower back.

Seat Depth

Slide the backrest forward or back to control how closely the lumbar support meets your spine.

C

You're all set.

Time to feel the difference.

FIRST SIT PROTOCOL

Your First Elevated Seating Experience

All adjustments done. Sit down. Follow these four steps:

1

Find your lumbar

Adjust backrest height and seat depth until the support sits naturally at your lower back curve.

2

Ensure feet are flat on the floor

Knees at or slightly wider than 90°

3

Adjust the Angle

Start with around +12 above horisontal

4

Relax onto the armrests

Drop your shoulders.
Let the armrests meet you.

J-Bar comparison
The J-bar controls the relationship between the seat and the backrest.
Vision Y: 96° · Vision X: 93°
Test both chairs. Let us know which one you and your users prefer.

A completely different seating experience
This will feel unlike any chair you have sat in before. That is by design. Give yourself 15 to 20 minutes to properly adjust to this new way of sitting.

REFLECT

Experience & Reflect

Stay seated for 15 to 20 minutes. Pay attention to these:

Natural Posture

Notice how your spine settles into alignment without effort.

Sitting Meets Standing

Your upper body feels almost as if standing. Your lower body feels as if seated. Notice there is no sliding and no extra pressure on your knees.

Circulation

Your knees are open beyond 90°.
How do your legs and lower body feel?

15-Minute Check-In

After 15 minutes, check in with your body. How does it feel?

The big picture
Three billion people sit for work every day. You now know what they are missing.

Congratulations.

You've experienced the future of ergonomic seating.

This first interaction should have given you a clear sense of what makes Elevated Seating different. Your ability to communicate this experience will be the key to every sale you make.
Thank you for placing your trust in Levitask.
We are excited to build this together.
